Product Description

Piston-type automatic filling machine is a new generation of automatic filling machine developed by our company with many years of production experience and absorbing the world's advanced technology. It adopts piston-type quantitative principle, electrical and pneumatic components are selected from world-renowned brands, controlled by PLC with human-machine interface, novel design, beautiful appearance, friendly interface, strong adaptability, simple operation, accurate filling volume, convenient maintenance, etc.

Advantages

1. [Ketchup filling machine factory China](#), Adopt world known brands of electrical and pneumatic components, with low failure rate, reliable performance and long service life.
2. Using high-strength stainless steel frame, easy to disassemble, easy to clean, in line with GMP requirements.
3. The filling volume and filling speed are easy to adjust, operated and displayed by the touch screen, and the appearance is beautiful.
4. With no bottle no filling function, the liquid level automatically controls the feeding;
5. No need to replace parts, you can quickly adjust bottles of different shapes and specifications.
6. The filling head is equipped with a special leak-proof device, and there is no wire drawing or dripping when filling.

Product specification

Model	JYT-GZ4T
-------	----------

Filling capacity	100-1000ml
Filling speed	1000-1500 bottles/hour
Filling accuracy	<±1%
Power supply	220V 50HZ
Power	2.8KW
Air pressure	0.4-0.6MPa
Size	2000*1350*2100mm
Weight	400KG

Payment

You can pay by 100% T/T, Ali-pay, 70% L/C at sight would be available for qualified bank.

Logistics

It can be shipped by terms of Ex-work, FCA,FOB,CNF,CIF by sea or by air
DHL, UPS, FedEx, TNT, EMS etc□based on the buyer's forwarder or ours.

FAQ

Q1:Can filling machines be used to fill oil products?

A1□Yes, all kinds of oil products are suitable for our filling machines,
General oil products can usually be classified according to the application of oil products.

Q2□If i have wide variety of oil types, can i use the same filling machine? What should i pay attention to when using it?

A2: Yes, oils with the same properties can be produced by sharing the same filling machine. It is recommended that when using the same filling machine, parts of the pipeline can be purchased with new filling tubes. When changing the products, the pump needs to be fully washed and replaces with a new set of filling tube to ensure that the product does not cross-contaminate when it is filled.

Q3: If we need to fill food product, does the material of the filling machine meet the food grade specifications?

A3: Yes, the filling tubes of our filling machines are all food grade certified. While filling liquids, the filling tubes are made of stainless steel 304 or 316 stainless steel with strong acid resistance, depending on your product.

Q4: Products like facial creams, moisture creams or sun creams which is poor fluidity, can they use the filling machine to produce?

A4: Yes, there are many types of cosmetic cream products, such as, body creams, hand creams, facial creams, etc., because the composition ratio of the products is different, the liquidity also has the difference, it is recommended that you provide your products. We can help you to test the products. We will suggest you a filling machine based on your product characteristics and fluidity. If you have special requirements, we can also create a customized model for you.

Q5: Can we fill the chili sauce with filling machine?

A5: Yes, we have a filling machine that can be applied to fill sauce products: salad dressing, chili sauce, mustard sauce, sweet chili sauce, sweet sauce, ketchup, orange marmalade, jam and sesame sauce. While choosing the filling machine, you are welcome to provide samples, we will help you test and find the most suitable filling machine for you.

Q6 : If the liquid product itself has a high viscosity and which needs to be stirred before filling. Can the filling machine be equipped with a stirring mechanism?

A6: For thick or viscous liquids that need to be filled with agitation, we have an optional mixing hopper or bucket to match the various types of filling machines to meet the needs of liquid product filling and packaging products that require mixing and stirring.
